

Department Department of Mathematics			Academic Year 2022-2023	Date 01/12/2022	
Course Unit Code MATH2103	Course Unit Title Calculus III		Semester/Year Fall/2	Number of ECTS Credits 7	
Language of Instruction	Turkish				
Type of Course Unit	Compulsory				
Prerequisites and co-requisites	-				
Address of course	-				
Local Credit	Theoretical	Practical	Laboratory	Presentation	Project
5	4	2	-	-	-
Name of Lecturers	Professor Mikail ET				
Assistants	-				

Course content	Uniform and Pointwise Convergence, Relation between uniform Convergence and Integral, derivative and related problems, Power Series, Integration and derivation of power series and related problems, Taylor Polynomials, Taylor series and related problems, Improper Integrals(First, Second and Third Type), Convergence tests for Improper Integrals and related problems, Laplace Transformations and related problems, Vector Valued Functions and Curves, Continuity, Limit, Integration and Derivation of Vector Valued Functions and related problems, Definition and Image set of Multi-Variable Functions, Limit and Continuity of two-Variable Functions and related problems
-----------------------	---

Weekly Detailed Course Contents	
Week	Topic
1	Uniform and pointwise convergence
2	Relation between uniform convergence and integral, derivative and related problems
3	Power series
4	Integration and derivation of power series and related problems
5	Taylor polynomials, Taylor series and related problems
6	Improper integrals(first, second and third type)
7	Convergence tests for Improper Integrals and related problems
8	Laplace transformations and related problems
9	General application
10	Vector valued functions and curves
11	Continuity, limit, integration and derivation of vector valued functions and related problems
12	Domain and ranges of multi-variable functions
13	Limit and continuity of two-variable functions and related problems
14	A brief evaluation of the course content and topics

Course Resources	1. Mathematical Analysis 2 (Mustafa Balcı) 2. Advanced Mathematics (Murray R. Spiegel)
-------------------------	---

Assessment Methods and Criteria	In-Term studies	Quantity	Percentage (%)
	Mid-Term Exams	1	40
	Quizzes	-	-
	Assignments	-	-
	Projects	-	-
	Term assignment	-	-
	Laboratory	-	-
	Other	-	-
	Final exam	1	60

On Assessment Methods and Criteria	A grade of success; is determined by using the relative evaluation system or the discretion of the instructor. In order to be able to evaluate the courses in which the relative evaluation system and the teaching staff member's discretion are applied, the final exam score of the student must be at least YSAS. Students who fall below this score are considered to fail directly. For the courses that can not be evaluated with the relative evaluation system, the distribution of the final grade of the final grade and the letter grades which are the equivalents of the success grades are determined by the consent of the instructor who gives the lesson using the table prepared by the Senate with 100 points. A student who has received a grade AA, BA, BB, CB or CC grade is deemed to have completed that course. A student who has received one of the grade DC or DD grades is deemed to have fulfilled that course condition. In order for a student who takes DD and DC letters to be counted as successful, the GNO must be at least 2.00. A student who receives a graded FF grade is considered to have failed that course.
---	--

Percentage of Course Category (%)	Mathematics and Basic Sciences	100
	Computer Sciences	0
	Programming Design	0
	Social sciences	0

Course Outcome	Students have basic information about uniform convergence, improper integrals, Laplace transformations and vector valued functions, multi-variable functions theoretically.
Aims of the course	1. To create the necessary infrastructure of the students in regard to the Calculus lesson. 2. Acquiring the technical knowledge that will be able to produce the most suitable solution to the students in problems that are related to analysis lesson and require solution.
The way of processing course	Face to face

Relation of the course with program outcomes				
Learning outcomes		1	2	3
1	To have advanced theoretical and applied knowledge in a way to prioritize the scientific approach supported by textbooks containing up-to-date information in the field, application tools and other resources			
2	Adapting and transferring the knowledge gained in the field to secondary education		X	
3	Ability to independently carry out an advanced study in the field			
4	Be aware of the necessity of lifelong learning and continuously improve their professional knowledge and skills.			
5	Using a foreign language at least at the European Language Portfolio B1 General Level, following the information in the field and being able to communicate with colleagues			
6	To be able to use information and communication technologies together with computer software at minimum advanced level of European computer license required by the field.			
7	Have the ability to make oral and written presentation in native language			
8	Having the ability to understand spoken English and use English at reading level			
9	To have the ability to assimilate mathematical concepts and understand the relationships between them, to recognize different aspects of the same concepts and relationships			X
10	To have the ability to define and formulate the relationships between items in non-mathematical disciplines in the language of mathematics.			X
11	To have the ability to use mathematical knowledge in different problems			
12	Having the ability to develop computer programs using mathematical knowledge			
Contribution of the course: 1:No 2:Partially 3:Completely				

Preparer: Professor Mikail ET

Preparation date: 01/12/2022
