

Department Department of Mathematics			Academic Year 2022-2023	Date 01/12/2022	
Course Unit Code MATH4111	Course Unit Title Mathematical Kinematics		Semester/Year Fall / 4	Number of ECTS Credits 3	
Language of Instruction	Turkish				
Type of Course Unit	Elective				
Prerequisites and co-requisites	-				
Address of course	-				
Local Credit	Theoretical	Practical	Laboratory	Presentation	Project
2	2	0	-	-	-
Name of Lecturers	Professor Vedat ASİL				
Assistants	-				

Course content	Smooth linear motion, position and path analysis, Finding velocity and acceleration equations, Obtaining speed-time graph from given road-time graph, Obtain acceleration-time graph from given speed-time graph, Position and displacement analysis, Speed and acceleration analysis, Curvilinear motion, Curvilinear motion in Cartesian coordinate system, Kinematic equations in the horizontal direction, Kinematic equations in the vertical direction, Normal and tangential coordinate system, Cylindrical / Polar coordinate system, Relative motion analysis
-----------------------	--

Weekly Detailed Course Contents	
Week	Topic
1	Smooth linear motion, position and path analysis
2	Finding velocity and acceleration equations
3	Obtaining speed-time graph from given road-time graph
4	Obtain acceleration-time graph from given speed-time graph
5	Position and displacement analysis
6	Speed and acceleration analysis
7	Curvilinear motion, Curvilinear motion in Cartesian coordinate system
8	Kinematic equations in the horizontal direction
9	General application
10	Kinematic equations in the vertical direction
11	Normal and tangential coordinate system
12	Cylindrical / Polar coordinate system
13	Relative motion analysis
14	A brief evaluation of the course content and topics

Course Resources	1. Lineer Cebir (H Hilmi HACISALİHOĞLU) 2. Çözümlü lineer Cebir (H Hilmi HACISALİHOĞLU)
-------------------------	--

Assessment Methods and Criteria	In-Term studies	Quantity	Percentage (%)
	Mid-Term Exams	1	40
	Quizzes	-	-
	Assignments	-	-
	Projects	-	-
	Term assignment	-	-
	Laboratory	-	-
	Other	-	-
	Final exam	1	60
On Assessment	A grade of success; is determined by using the relative evaluation system or the discretion of the instructor. In order to be able to evaluate the courses in which the relative evaluation system and the		

Methods and Criteria	teaching staff member's discretion are applied, the final exam score of the student must be at least YSAS. Students who fall below this score are considered to fail directly. For the courses that can not be evaluated with the relative evaluation system, the distribution of the final grade of the final grade and the letter grades which are the equivalents of the success grades are determined by the consent of the instructor who gives the lesson using the table prepared by the Senate with 100 points. A student who has received a grade AA, BA, BB, CB or CC grade is deemed to have completed that course. A student who has received one of the grade DC or DD grades is deemed to have fulfilled that course condition. In order for a student who takes DD and DC letters to be counted as successful, the GNO must be at least 2.00. A student who receives a graded FF grade is considered to have failed that course.
-----------------------------	---

Percentage of Course Category (%)	Mathematics and Basic Sciences	100
	Computer Sciences	0
	Programming Design	0
	Social sciences	0

Course Outcome	Students will have basic knowledge about regular linear motion, curvilinear motion and relative movement with respect to each other
Aims of the course	1. To provide students with the necessary information infrastructure for the Kinematics course. 2. To acquire the technical knowledge that will be able to produce the most appropriate solution for the students who are interested in the Kinematics course.
The way of processing course	Face to Face

Relation of the course with program outcomes				
Learning outcomes		1	2	3
1	To have advanced theoretical and applied knowledge in a way to prioritize the scientific approach supported by textbooks containing up-to-date information in the field, application tools and other resources			
2	Adapting and transferring the knowledge gained in the field to secondary education			
3	Ability to independently carry out an advanced study in the field			
4	Be aware of the necessity of lifelong learning and continuously improve their professional knowledge and skills.		X	
5	Using a foreign language at least at the European Language Portfolio B1 General Level, following the information in the field and being able to communicate with colleagues			
6	To be able to use information and communication technologies together with computer software at minimum advanced level of European computer license required by the field.			
7	Have the ability to make oral and written presentation in native language			
8	Having the ability to understand spoken English and use English at reading level			
9	To have the ability to assimilate mathematical concepts and understand the relationships between them, to recognize different aspects of the same concepts and relationships			X
10	To have the ability to define and formulate the relationships between items in non-mathematical disciplines in the language of mathematics.			X
11	To have the ability to use mathematical knowledge in different problems			
12	Having the ability to develop computer programs using mathematical knowledge			
Contribution of the course: 1:No 2:Partially 3:Completely				

Preparer: Associated Professor Emrah YILMAZ
Preparation date: 01/12/2022
